

## Lunar Map Pro

### Performance Acceleration for Windows 98/ME

If you are running LMP on Windows 98 or ME, you can now improve LMP performance by at least a factor of two. Simply download the program **setCached.exe** and follow the instructions below.

NOTE: this program modifies LMP files only. It does **not** affect the performance of any other applications.

#### Instructions:

Please read and follow all instructions carefully.

1. Download setCached.exe to the location of your choice.
2. Using Windows Explorer, go to the directory where the file has been placed.
3. Double-click setCached.exe (If your computer is set to not show file extensions, you will only see setCached). This will launch setCached.exe, which immediately searches for the LMP installation. If the setCached program finds the LMP installation (which will typically happen if you installed LMP in the default location), the setCached Dialog will appear, showing only an "Update Data" button; otherwise, in addition to the "Update Data" button, the dialog will show an empty text field labeled "Lunar Map Pro Directory" and a "Browse" button.
4. Do ONE of the following:

CASE 1: Your LMP installation directory was found automatically  
Just click the "Update Data" button and go to Step 5, below.

CASE 2: Your LMP installation directory was **not** found automatically (because you chose a directory other than the default when you installed LMP)

- Click the "Browse" button to navigate through your file system to the "Lunar Map Pro 1.0" directory. If you do not remember where you installed LMP, do the following:
  - Click the right mouse button on the LMP desktop ICON and move the mouse over "Properties" and click. The Lunar Map Pro Properties Dialog comes up.
  - On the Lunar Map Pro Properties Dialog, click the "Shortcut" tab. You will see a text field called "Target:".
  - Copy the path shown, up to and including the path element "Lunar Map Pro 1.0", to the "Lunar Map Pro Directory" field on the setCached Dialog, or use the "Browse" button to navigate to it.
- Click the "Update Data" button

5. When setCached completes, you will see a small message box that says: "Your files have been updated. Unless you reinstall the application, you will not need to re-run this utility."
6. Click "Ok" on the message box.

Your updated LMP is now ready to use.
